

CentraSECURE Backup MX acts as a backup storage location that receives all incoming e-mails when primary mail servers are unreachable. When the service to the email servers have been restored, our CentraSECURE Backup MX service will redeliver emails to the primary mail servers transparently and automatically.

What's the solution?

CentraSECURE Smart Relay

An intelligent high performance backup MX gateway that provides a secondary, off-site mail server(s) (commonly called "store and forward") to store your email in the event your primary mail server is offline for any reason.

These services are provided out of CentraComm's two carrier class data centers, each with N+1 redundancy for all mission critical systems.

Why CentraComm and CentraSECURE Backup MX?

Business Continuity - Enterprises better ensure that their mail is always available for their employees, customers, and business partners. Provides an incoming mail delivery location in the event of a disaster and assurances that no messages are ever lost. Provides added compliance to Sarbanes-Oxley, HIPPA, Gramm-Leach-Bliley Act, and other legislation for business continuity.

The CentraComm Network – Our all IP network and dual data centers were engineered from the ground up for the ultimate in reliability and performance featuring:

- Dedicated, Self-Healing, OC-X SONET Ring Connectivity to Multiple Providers
- Climate-Controlled (Temperature, Humidity, and Airborne Particles) Environment
- Dual Waterless, FM-200, Fire-Suppression Systems
- Natural Gas and Diesel Generators with Automatic Failover
- Always On High Capacity Uninterruptible Power Supplies (UPS) with Surge Suppression
- Biometric Security

Service Level Commitment – We put our commitments in writing and provide you credits if for any reason we fail to honor them.
